GRUB2 on UEFI

These instructions are most likely outdated. They are kept here for posterity.

This works fine. You need your `boot` section configured like this:

```
{
  # ...
  boot = {
   loader = {
     gummiboot.enable = false;

     efi = {
       canTouchEfiVariables = true;
     };

     grub = {
       enable = true;
       device = "nodev";
       version = 2;
       efiSupport = true;
     };
   };
  };
  # ...
}
```
