Proprietary AMD drivers (fglrx) causing fatal error in i387.h

If you get this error:

```
/tmp/nix-build-ati-drivers-15.7-4.4.18.drv-0/common/lib/modules/fglrx/build_mod/2.6.x/firegl_public.c:194:22:
fatal error: asm/i387.h: No such file or directory
```

... it's because the drivers are not compatible with your current kernel version. I've worked around it by adding this to my `configuration.nix`, to switch to a 4.1 kernel:

```
{
  # ...
  boot.kernelPackages = plgs.linuxPackages_4_1;
  # ...
}
```
